

ABSTRACT OF THE DISCLOSURE

A microwave food covering assembly includes a stand that includes
5 panel having a top side and a bottom side. Each of a plurality of legs is
attached to and extends downwardly from the bottom side. Each of the
legs is positioned generally adjacent to a peripheral edge of the panel. A
covering includes a top wall and a peripheral wall that is attached to and
extends downwardly therefrom. The top wall has generally the same shape
10 as the panel. The top wall has a shortest diameter having a length greater
than a shortest diameter of the panel. The stand may be positioned over
food and the covering positioned over the stand such that the peripheral
wall extends downward.
